An Agri Sales Management App

Name : P. Pon Ajith Kumar

Roll No. : 2023115036

Introduction

Uzhavan, the Agri Sales Management app aims to streamline the agricultural sales process by providing farmers and buyers a platform to connect efficiently. By digitizing sales, the app helps reduce market inefficiencies, improve pricing transparency, and offer farmers better market access, ultimately supporting agricultural growth and economic development.

Advantages of the Proposed System:

1) Well-structured classification of agriculture products

2) Easy and Interactive to use by the farmers.

Technologies Preferred

Front End **:** *HTML, CSS, Java Script, Bootstrap*

Back End *: Python*

Database *: PostgreSQL*

Framework *: Flask*

API *: AJAX (Asynchronous Java Script XML)*

Abstract Overview of the Project

The agricultural sales management database is going to involve admin, seller and customer.

Key Features

Sign Up / Login

- Separate registration and login interfaces for admins, farmers (sellers), and customers to ensure role-based access and management.

Admin Page

- **My Account Page**
  - Admins can view and update their account details.
- **Update Section**
  - A dedicated interface for modifying account information.
- **List of Registered Farmers/Sellers**
  - View a comprehensive list of all registered sellers, ensuring easy tracking and management.
- **List of Registered Customers**
  - Admins can view the details of all registered customers.
- **Product Catalogue**

- A categorized display of all products listed on the platform, enabling easy management.

- **Purchase Request History**
  - Track and manage all incoming purchase requests for products.
- **Complete Bill Report**
  - Generate and view detailed billing reports of all completed transactions on the platform.

Farmer/Seller Page

- **My Account Page**
  - Farmers can manage and update their account information.
- **Update Section**
  - A section dedicated to editing personal and account details.
- **Farmer ID Card**
  - A unique farmer ID generated for each registered seller for identity verification.
- **Product Listing**
  - Farmers can list their products for sale, update prices, and manage their listings.
- **View Products on Sale**
  - Farmers can track and monitor their active product listings.
- **Uzhavan Store**

- A pending request section that allows farmers to view and manage customer requests for their products.

- **Order Management**
  - Farmers can accept or reject orders directly through the platform.

- **Notifications**
  - Any customer requests or updates are communicated to the farmer via email and SMS notifications.

Customer Page

- **My Account Page**
  - Customers can view and update their account details.
- **Update Section**
  - A section for customers to edit their personal information.
- **Customer ID Card**: A unique customer ID generated for every registered buyer.
- **View Products**
  - Customers can browse the variety of products listed by farmers on the platform.
- **Uzhavan Store**
  - Customers can view the list of products they've ordered and track their order status.
- **Order Acceptance**

- Customers have the ability to accept or reject orders, with notifications sent to the seller.

- **Notifications**
  - Any order acceptance or updates are communicated to the farmer via email and SMS for real-time interaction.
